

“TRIP IT” Team

- Salvador
- Adi
- Tejas
- Kendall
- Smiti

Technologies :

- Python
- Flask
- JavaScript
- D3
- Leaflet
- Plotly
- HTML – Bootstrap
- Mongo DB
- JS library not taught in class (TBD)

Primary Github - <https://github.com/sacosi/trip-it>

Inspiration-

Idea to implement this project is driven by various factors –

1. Due to the lockdown, planning trips are amongst the top things that a lot of people are doing and that’s where we decided to create a one stop destination where prospective travelers could gather quick trip related information on some popular cities of US.
2. We want to utilize and cover as much of the technical content that we are taught and gain expertise in the same.
3. Creating something useful with easy user interaction interface and at the same time is visually attractive
4. Creating something and in the same time useful for anyone to plan a trip in the major cities.
5. Availability of legitimate data sources.
